ANSELMO GARZA

Senior QA Dev Engineer | QA Automation & Technical Leadership

jose.anselmo@gmail.com **Portfolio / Quality Lab**

English: Advanced professional proficiency | Spanish: Native

PROFILE

Senior QA Dev Engineer specializing in C#/.NET automation, Playwright, Blazor, and CI/CD. Leads a four-person regression QA team while owning framework automation for a major UI client migration. Reduced execution times by approximately 50% across three suites without reducing test scope. Develops AI-assisted workflows for test migration, regression analysis, Jira reporting, and change-based test-suite recommendations.

TECHNICAL SKILLS

Automation: C#, .NET, Playwright, Selenium WebDriver, NUnit, MSTest
Delivery: Azure DevOps, Azure Repos, Git, Jenkins, Groovy, parallel execution
Diagnostics: PowerShell, IIS, AppCmd, TRX analysis, focused reruns
Data and environments: SQL Server, SSMS, SQLCMD, backup/restore workflows, virtual-machine maintenance, SQL Server 2025 and Linux migration validation
Leadership: Work allocation, prioritization, code reviews, mentoring, release QA sign-off, stakeholder updates, migration test strategy
AI-assisted engineering: Reusable skills for test migration, regression analysis, Jira reporting, and PR-based test-suite recommendations
Practices: End-to-end testing, manual validation, defect investigation, execution-time measurement, documentation, Agile/Scrum
Domains: Prophet 21 ERP, human capital management
Additional exposure: Basic API testing with Postman

EXPERIENCE

EPICOR SOFTWARE | January 2013 - Present

Senior QA Dev Engineer | January 2016 - Present
Regression QA team leadership | May 2026 - Present

- Own the automation framework for a Blazor UI client migration from a client-server architecture to a server-only architecture, adapting tests to changes in rendering, layouts, and application behavior.
- Migrate legacy Selenium/Angular automation to Playwright/Blazor while maintaining coverage parity with the legacy client, adding tests, reporting defects, repairing framework issues, and validating manually.
- Map legacy test intent to async workflows, including UI state assertions, synchronization requirements, and browser cleanup checks.
- Lead a four-person regression QA team, assigning work, managing priorities, reviewing code, mentoring teammates, and providing performance feedback to management.
- Assumed team leadership during a management transition, maintaining continuity of regression testing, environment operations, and releases.
- Reduce suite execution times by approximately 50% through parallelization with unchanged test scope: full regression 16 to 8 hours, Open suite 12 to 6 hours, and Retrieve suite 8 to 4 hours.
- Implement and maintain Azure DevOps test pipelines; coordinate execution and analyze results across multiple client configurations.

ANSELMO GARZA

Senior QA Dev Engineer | QA Automation & Technical Leadership

jose.anselmo@gmail.com **Portfolio / Quality Lab**

- Coordinate regression validation for SQL Server 2025 and Linux migrations, alongside Azure DevOps and virtual-machine maintenance.
- Own regression QA sign-off: require blocking defects to be resolved and fixes retested before providing a positive release-readiness recommendation.
- Coordinate code-cut activities, including test-repository branching, deployment and database preparation, documentation, and weekly reports.
- Define client-migration QA strategy and introduce AI-assisted workflows for Selenium-to-Playwright migration, regression analysis, and Jira reporting.
- Create reusable AI skills that review developer PR changes and recommend relevant test suites for targeted validation.
- Investigate pipeline, deployment, test, and artifact failures using TRX analysis, focused reruns, SQL Server tools, PowerShell, and IIS diagnostics.

Junior QA Dev Engineer | January 2013 - January 2016

- Created and maintained Selenium WebDriver/NUnit automation and framework components for Epicor HCM.
- Designed and executed tests for benefits, absences, time-off requests, and related HR workflows.
- Performed cross-browser validation and tracked defects in Jira.

Recognition: Epicor top 5% of performers in 2015.

DEXTRA TECHNOLOGIES | October 2011 - December 2012

Mobile application quality assurance

- Evaluated applications against Nokia Store requirements and quality policies.
- Supported consistent testing through peer review and process guidance.

EDUCATION

Bachelor’s Degree in Computer Systems Administration
Autonomous University of Nuevo Leon | FIME | Graduated 2010
